

BLUESHIELD TACTICAL SYSTEMS

Drones for First Responders

We all realize that drones are the wave of the future in public safety, which means the training necessary must also meet the stringent demands related to this new technology. This 32-hour class prepares public safety personnel to begin the process of starting a UAS / drone program in their agency as well as to sit for the FAA Part 107 Remote Pilot exam which is required for a public safety UAS program in the United States. Students will spend class time on topics such as federal and local regulations, Airspace, and public safety exceptions. After the class, you will feel confident to pass the part 107 exam and confident in using a drone in the field. This class comes with a three-day option where the last day of flight time is not needed due to the experience level of the attending officer. This course is limited in student attendance due to the nature of the program and the space available.
