

BLUESHIELD TACTICAL SYSTEMS

Indoor Drone Tactics for Law Enforcement

This 16-hour course exposes students to various indoor drone technology available to public safety personnel and teaches them to operate drones confidently in confined spaces and indoor environments. This class is ideal for operators needing to enhance their skill level in flying drones indoors for tactical operations. We've partnered with major Drone manufacturers to provide participants with top-of-the-line equipment and training, allowing operators an opportunity to familiarize themselves with indoor-drone thermal abilities, tactical communication abilities, turtle mode, and other indoor uses. The program will include discussions and hands-on flight time on where and how to implement indoor drone operations both safely and efficiently while reducing the chances of injury. While part 107 is not required for the class drone experience and flight time is highly suggested.
